

PRESENTATION SLIDES OUTLINE

Sippeto

Sistem Pencatatan Penjualan UMKM Desa Toyoresmi

Multi-Branch POS & WhatsApp E-Catalog for Village UMKM
Toyoresmi Village, Ngasem District, Kediri Regency

Program PPK Ormawa Pijar Raya 2026 - Kemendikbudristek

Slide 2: Background & Context (The Problem)

- **Manual Records:** Slow process, calculation errors, and risk of losing receipt books.
- **No Stock Sync:** Discrepancy between available inventory and actual physical sales.
- **No Online Store:** High cost of web hosting and lack of technical knowledge to build a website.
- **PPK Ormawa Action:** Deploying SIPPETO to digitize Toyoresmi Village local businesses.

Slide 3: Project Goals (Our Mission)

- **Empower UMKM:** Provide free, high-quality business management tools for local merchants.
- **Automate Admin:** Real-time synchronization of cashier sales with stocks and bookkeeping.
- **Expand Market:** Create free, instant online catalogs to reach buyers outside the village.
- **Secure Transactions:** Protect merchant data and secure WhatsApp numbers from web spam.

Slide 4: Key Features

1. Merchant Dashboard	2. Cashier POS	3. WhatsApp E-Catalog
Central panel for owners to manage products, branches, track cash flow, and print financial reports.	Simple cashier application for physical selling points. Automatically deducts branch inventory on checkout.	Public mobile-responsive shop link. Customers can browse, cart, and order directly via WhatsApp.

Slide 5: Simple Technology Stack

Frontend (User Interface)	Backend (Core Logic)	Infrastructure & Security
Next.js & Tailwind CSS: Fast, clean, and mobile-friendly layouts for both admin and customers.	Golang & PostgreSQL: Golang for high-speed API requests. PostgreSQL database for secure transaction and inventory records.	Docker, Caddy & MinIO: Docker containerization. Caddy reverse proxy with auto HTTPS. MinIO cloud storage for product images.

Slide 6: Key Advantages

- **Seamless Integration:** Real-time synchronization between in-store sales and the online web store.
- **Easy to Use:** Simplified layout designed specifically for non-tech-savvy village business owners.
- **Low Maintenance Cost:** Runs in lightweight container packages, keeping server hosting expenses low.
- **Spam Shield:** Honeypot security and server routing block automated spam orders on WhatsApp.

Slide 7: Execution Roadmap

- **Phase 1: Foundation Setup:** Database structures, multi-branch and multi-tenant schema setups.
- **Phase 2: Cashier POS:** Implementation of checkout app with automatic inventory deduction.
- **Phase 3 & 4: Storefront & WhatsApp:** E-catalog website launch with secure checkout to admin WhatsApp.
- **Phase 5: Automated Ledgers:** Auto-generated finance reports on orders approved. Final system launch.
